Serial No.: Not Assigned

Filed: Herewith

wherein a change in the amount of IgE as compared to the amount produced in the absence of said candidate agent indicates that said agent modulates IgE production.

18. A method according to claim 16 wherein said cell comprises a IgE fusion protein comprising:

A7

- a) an ∈ heavy chain; and
- b) a fluorescent protein.

21. A method according to claim 19 wherein said retroviral vector further comprises a nucleic acid encoding a fluorescent label and wherein said nucleic acid further comprises a detection gene.

C)

Please add the following new claims:

Rull Rull

30. A method according to claim 18 wherein said fluorescent protein is GFP.

13

31. A method according to claim 21 wherein said detection gene is a fluorescent protein gene and wherein said fluorescent protein gene is GFP.

32. A method according to claim 21 wherein said detection gene is a fluorescent protein gene and wherein said fluorescent protein gene is BFP.
